Installation Method

1. ROLL IT OUT

Lay out the black frame and close deflation zipper.

2. PROJECTION SCREEN

Stick the projection screen on the inflatable screen

3. ROPE

Tie the rope to the inflatable curtain

4. GROUND NAIL

Insert the ground nail into the grass and tie the rope

support@owlenz.com

Installation Method

5. ATTACH BLOWER

Plug in the blower to a power outlet and tie tube to blower.

Note: The blower is not waterproof

6. LET IT INFLATE

Turn on the blower and watch the frame inflate in less than 5 minutes.

7. ATTACH SCREEN

Attach the white projection screen to the black frame.

8. PUT AWAY

Turn off the blower and open the deflation zipper

Questions & answers

Q: Does the blower need to stay on while watching movies?

A: Yes, the blower has to stay on.

Q: Does the blower have a Deflate function when taking it down?

A: No. Unplug the blower and open the zipper. It will deflate quickly.

Q: Is the blower quiet enough to use indoors without being distracting during a presentation?

A: Yes, it's quiet enough to neglect the sound during a presentation.

Q: Can you place the projector behind the screen for front viewing?

A: No, the back is black and opaque.

Q: Can the white screen be washed and if so any special instructions or special precautions?

A: Yes it can be washed with a mild detergent in cold water. Do not put in then dryer.

Q: How far the projector should be from the screen(front or back) for the best image? Thank you !

A: I depends on the projector. We just set it up and kept scooting it back until it took up the whole screen. We set the projector up in front of the screen, like when at a movie theater. Works best if it's dark outside. No street lamps or other light.

Q: are the air compressor work at 220V ?

A: The air blowers are actually configured for 110v .
